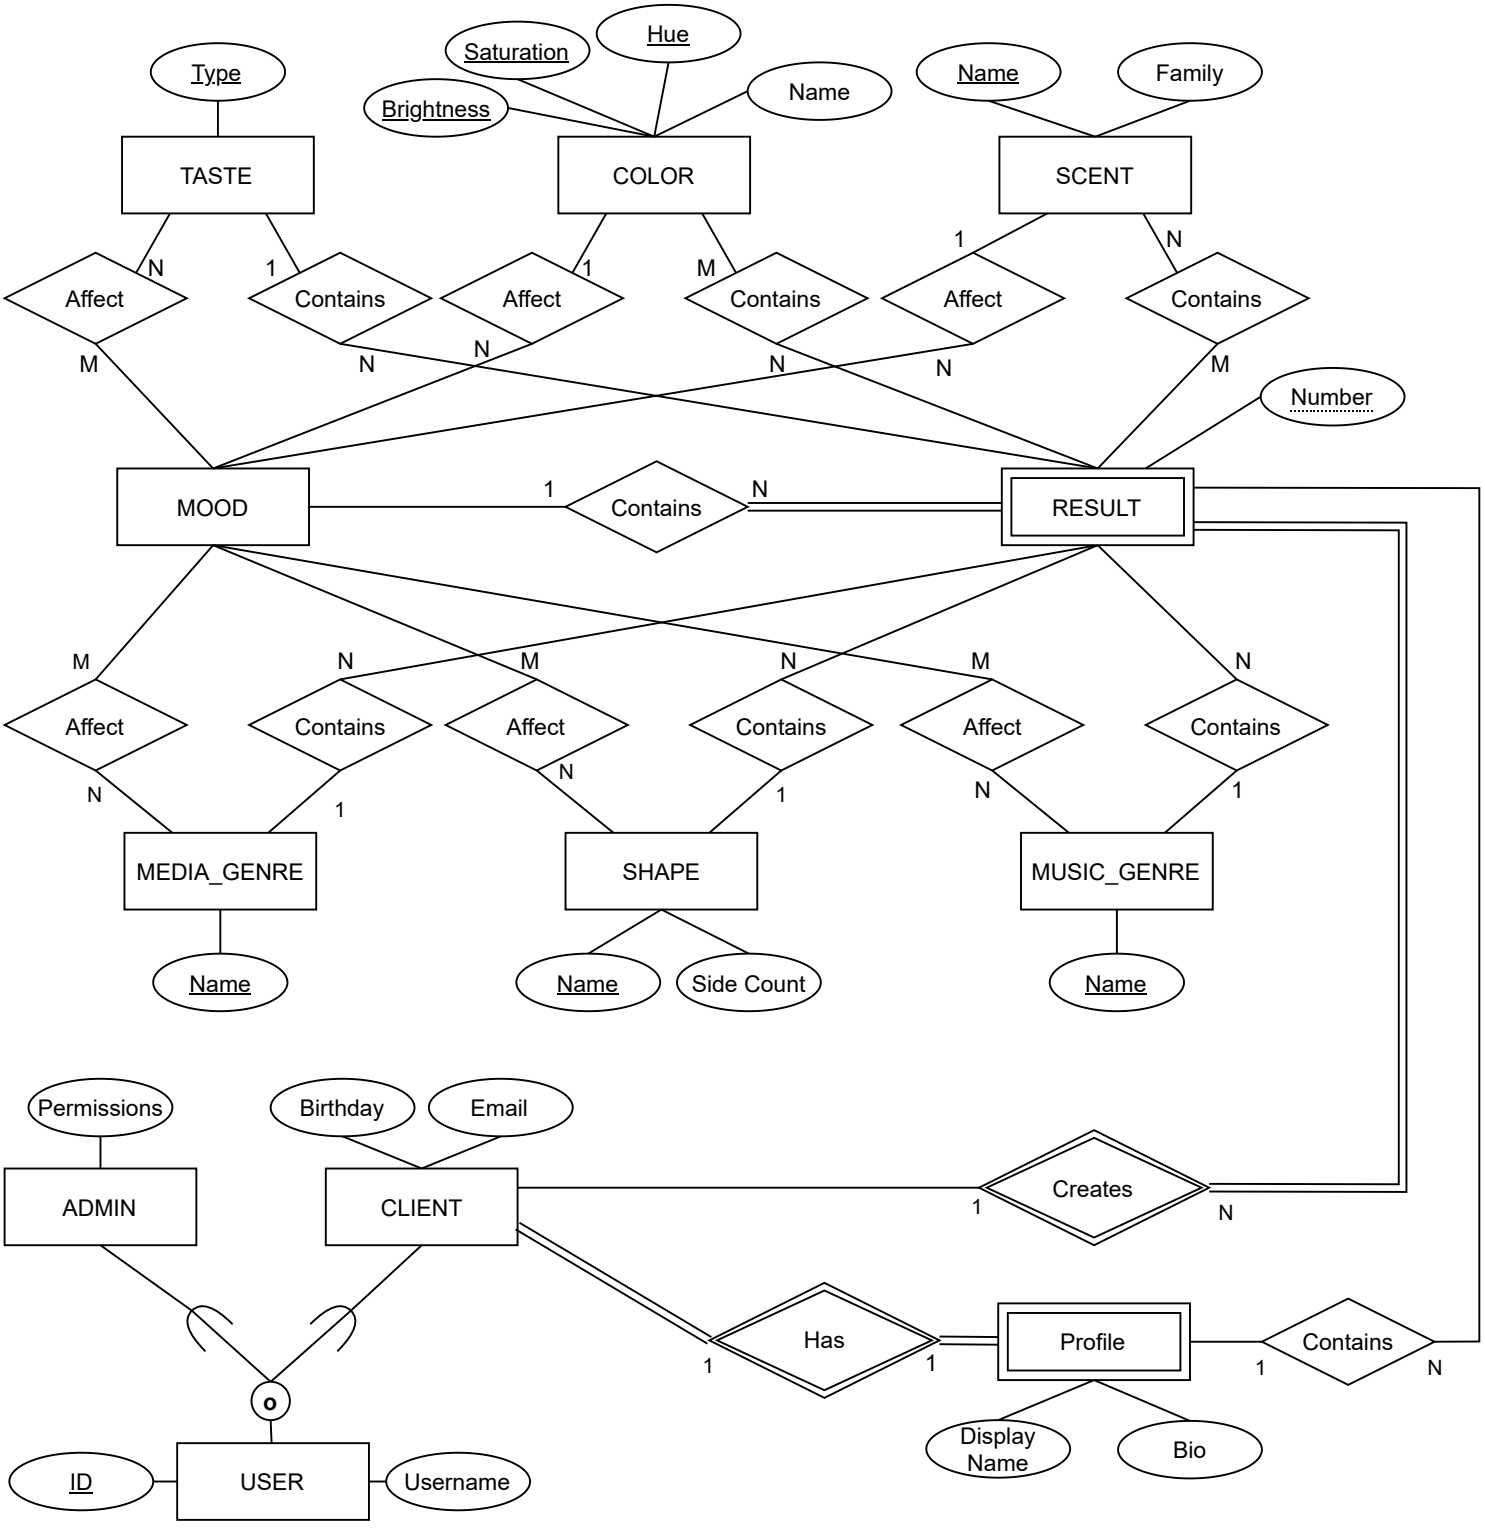
Vibe Extended Entity Relationship Diagram

Ryan Allard, Alexanna Little, Delara Shamanian



Note: Username is a unique attribute

Note: The many to many relationships between "MOOD" and the 6 qualia ("COLOUR", "SCENT", "MUSIC_GENRE", "SHAPE", "MEDIA_GENRE", "TASTE") will be created by "CLIENTS" when they create "RESULTS". "RESULTS" will be stored as a whole and appear on "PROFILES," and the connections between "MOOD" and each qualia will be stored independently. Since "CLIENTS" are required to select a "MOOD" when creating a ""RESULT", we can fill in any blanks clients leave if they do not select one of the qualia when making their results using the most frequently occurring relationship between that mood and qualia. This is the basic idea of how our database will recommend sensory experiences to clients.
